📖 Data Dictionary — Vrinda Store 2022

> This document defines every column in the `Vrinda Store` raw data sheet.

Sheet: `Vrinda Store` (Raw Data)

Column Name	Data Type	Description	Example Values
`Index`	Integer	Row sequence number	1, 2, 3…
`Order ID`	String	Unique identifier per order (platform-issued)	`171-1029312-3038738`
`Cust ID`	Integer	Numeric portion of Order ID used as customer proxy	`1029312`
`Gender`	String	Customer gender at time of order	`Men`, `Women`
`Age`	Integer	Customer age in years	`20`, `44`, `67`
`Age_Group`	Formula	Derived age segment using IF formula	`Teenager` (<30), `Adult` (30–49), `Senior` (50+)
`Date`	Date	Full order date	`04-Dec-2022`
`Month`	Formula	Month extracted from Date using TEXT formula	`Jan`, `Feb` … `Dec`
`Status`	String	Final order outcome	`Delivered`, `Cancelled`, `Returned`, `Refunded`
`Channel`	String	E-commerce platform where order was placed	`Amazon`, `Myntra`, `Flipkart`, `Ajio`, `Meesho`, `Nalli`, `Others`
`SKU`	String	Stock Keeping Unit — unique product code	`JNE1233-BLUE-KR-031-XXL`
`Category`	String	Product type / category	`kurta`, `Set`, `Saree`, `Western Dress`, `Top`, `Ethnic Dress`, `Blouse`, `Bottom`
`Size`	String	Garment size	`XS`, `S`, `M`, `L`, `XL`, `XXL`, `3XL`, `4XL`, `5XL`, `6XL`

Column Name	Data Type	Description	Example Values
`Qty`	Integer	Number of units in the order	`1`, `2`
`currency`	String	Transaction currency (always INR for this dataset)	`INR`
`Amount`	Integer	Order value in Indian Rupees	`376`, `1449`, `729`
`ship-city`	String	Delivery city (uppercase)	`MUMBAI`, `BENGALURU`
`ship-state`	String	Delivery state (uppercase)	`MAHARASHTRA`, `KARNATAKA`
`ship-postal-code`	Integer	Delivery PIN code	`400001`, `560001`
`ship-country`	String	Delivery country (always IN)	`IN`
`B2B`	Boolean	Whether the order is a business-to-business order	`TRUE`, `FALSE`

Derived Sheets (Pivot Tables)

Sheet Name	Source	Key Aggregation
`Sales by Order`	Raw Data	`SUM(Amount)` + `COUNT(Order ID)` grouped by Month
`Men & Women`	Raw Data	`SUM(Amount)` grouped by Gender
`Status by Order`	Raw Data	`COUNT(Order ID)` grouped by Status
`Top 5 Citys`	Raw Data	`SUM(Amount)` grouped by ship-city, top 5
`Age_Group by M & W`	Raw Data	`COUNT(Order ID)` grouped by Age_Group × Gender

Sheet Name	Source	Key Aggregation
`Order amount by channel`	Raw Data	`COUNT(Order ID)` + `SUM(Amount)` grouped by Channel
`Order by channel`	Raw Data	Senior segment filtered, grouped by Channel
`Sheet14`	Raw Data	`SUM(Amount)` grouped by Category

Age Group Formula Logic

```excel
=IF(E2>=50, "Senior", IF(E2>=30, "Adult", "Teenager"))
```

Age Range	Group
Under 30	Teenager
30 – 49	Adult
50 and above	Senior

Notes & Data Quality

- All monetary values are in **Indian Rupees (INR)**
- `Month` is formula-derived — recalculates automatically if date changes
- `B2B` column is mostly `FALSE` in this dataset; B2B orders are a small minority
- `ship-country` is exclusively `IN` — this is a domestic India-only dataset
- City and state names are in ALL CAPS as exported from the platform
- A small number of rows may contain formula outputs rather than static values
